

A**B**

Illumina study design

Kidney
Liver

* Sequenced at a concentration of 1.5 pM

A Pair of lanes, same concentration

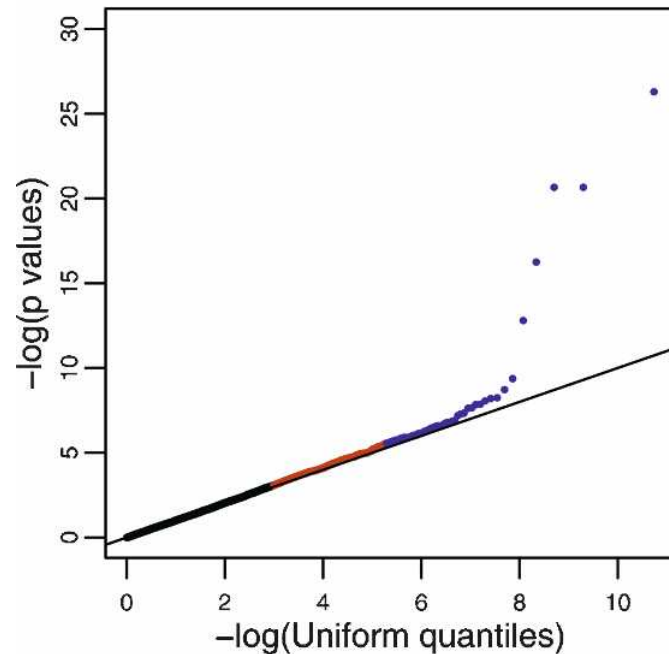

Figure 1. Graphical representation of the study design. (A) Summary of the experimental design. (B) The lanes in which each sample was sequenced across the two runs. In each run, the control sample was sequenced in lane 5. Samples were sequenced at two concentrations: 1.5 pM (indicated by an asterisk) and 3 pM (no asterisk).
